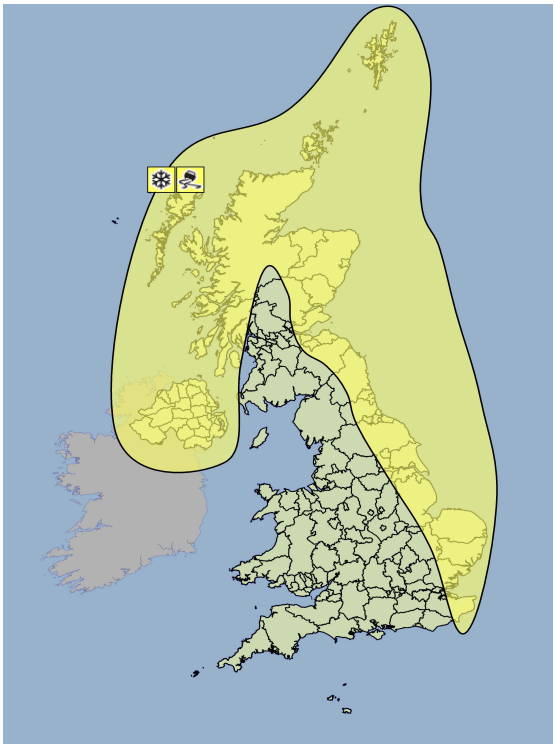
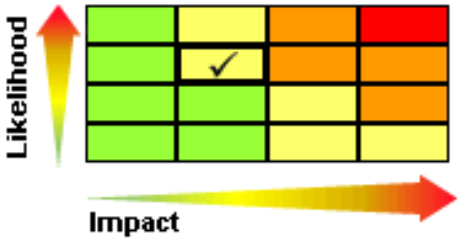
National Severe Weather Warning Service





Chief Forecasters Assessment
The arctic airmass, by this time already firmly established across the UK, will continue to bring frequent and heavy snow showers to eastern parts of the UK. During Tuesday, winds over England are expected to veer a little more towards north to northeast, and this will allow showers to spread a little further inland over eastern areas, with snow showers possibly falling quite widely across northern England (east of the Pennines), along with parts of the Midlands and parts of southeast England. The airmass is sufficiently cold for snow showers to accumulate at low levels, perhaps giving several cm in places.

There is the potential for disruption throughout this period due to the accumulating snow and ice but also with temporary blizzard conditions leading to very difficult driving conditions.

The Met Office have issued a **Yellow Alert** of **Snow and Ice**

Valid from **00:05 on Tue, 03rd Feb 2015** until **23:55 on Tue, 03rd Feb 2015**

Snow showers will continue to affect parts of Scotland, Northern Ireland and eastern England during Tuesday, giving icy patches in places. Accumulations of snow are possible in places, even to low levels. The public should be aware of the potential for disruption to travel.

This is an update to the Alert issued on Friday to extend the areas covered to include Northern Ireland, western Scotland and parts of southeast England. This is due to a reorientation of the areas covered to mirror latest forecast probabilities.
